

## Review SENA SMH10

At Mr. Mobile we have spent a lot of time in finding a good replacement for the old Interphone. We received a lot of feedback from our Interphone customers and what many consumers consider important in a motorcycle headset. Finally, we have found the best solution in terms of price and quality in the form of the SENA SMH10!

After spending a great deal of time researching and testing dozens of different products, from around the world we settled on the SENA SMH10. Below we will explain a number of points and you will see what really makes it the best available in the motorcycle market!

### ***Bluetooth Specification v2.1***

Thanks to the latest Bluetooth v2.1 and the advanced digital processing technology, the SMH10 offers the best sound quality for both incoming and outgoing sound in its class. Also, the easy-to-access and intuitive button operations make the SMH10 a perfect companion for motorcycles.

### ***Bluetooth Intercom up to 900 meters***

We tested the SENA SMH10 multiple times and we found out that the sound quality is amazing compared with the other new brands. When we were testing the SMH-10 in intercom mode we achieved up to 850 meters. We still had incredible sound quality and could talk easily with each other. The quality was truly amazing it was far and away the best of any other brand in Intercom mode.

### ***Multi-Pair Bluetooth intercom for 4 users***

The SMH10 has the versatility, clarity and range that all interphone users have been waiting for. You are able to configure up to four users and switch between them with one, two or three quick pushes of the Jog Dial, a function that riders, organized groups or support team will be able to exploit fully. As you can see in the picture (right) the Jog Dial is a big wheel in the middle of the unit. It is easy to use with gloves and that's makes it ideal for motorbike users.

It is also very easy to pair the headsets with each other. Normally it can be time consuming but with the SMH10 it's too easy. Just turn the unit on (push the phone button and the Jog Dial at the same time) and after that push the phone button for 5 seconds, it's now in pairing mode. Push one of the units you want to pair and wait for 2 seconds. There now paired, too easy!

### ***Bluetooth stereo headset for Bluetooth audio devices such as MP3 players***

As already mentioned the sound quality of the SMH10 is stunning. When we were using the headset for the intercom we just couldn't believe the sound quality. It is very clear and keeps this quality even when you're up to 900 meters apart. If you're a real intercom user you have to get the SENA and just experience the quality of the sound. I know you will be more than satisfied with its stunning sound just like I was!

### ***Bluetooth music playback control by AVRCP: play, pause, track forward and track back***

Another great feature of the SMH10 is the Bluetooth music playback controlled by AVRCP. This makes it

Shop E, 1 Shirley Street Alexandria NSW 2015, Ph: 02 8338 8558 Fax: 02 8338 8559 ABN: 97 056 364 099

[www.mrmobile.net.au](http://www.mrmobile.net.au)

very easy to stream music from a Bluetooth music player because the controls are very simple to use.

There are just three things you need to know:

Push the Jog Dial for  
Play/pause music

Just twist the Jog Dial  
to change the volume

Push and twist to  
easily change songs

### ***Bluetooth headset or stereo headset for Bluetooth GPS navigations***

It is also very easy to use GPS on the SENA. The unit easily pairs up with every Bluetooth device tested, this is a really attribute compared with other motorbike communication kits. You can just use the intercom and if you want to use the GPS simply push on the Jog Dial and the GPS is activated. Don't need the GPS anymore? Just one click of the Jog Dial and your back into intercom mode. Too easy!

### ***Stereo music by 3.5mm audio cable***

If you have a music player that doesn't work with Bluetooth there is a 3.5 mm input. You can just plug the player in and listen to music with your iPod etc. Please note, the AVRCP controls only work with a music player/radio that is enabled with Bluetooth so you need to manual control the wired unit.

### ***Water resistant for use in inclement weather***

Weather conditions have very little impact and signal degradation is very minimal even at extended distances. The SENA SMH10 is also resistant against rain and that's a great feature for bikers so they don't have to worry about the weather.

### ***Crystal clear and natural sound quality***

As already mentioned the sound quality is outstanding. The SENA SMH10 has the clearest sound I ever heard from any Intercom unit. We have now been using the SENA SMH10 for over 4 weeks and the sound quality is still outstanding. The speakers are obviously very high quality. The speakers also have a really good bass response and the volume has a huge range. After testing the SENA SMH10 I can say that the sounds are of hi-fi quality!

### ***Up to 12 hours talk time, 10 days stand-by time***

Battery life of the SENA is excellent. In a mixed use environment, with pretty heavy intercom and audio use, a single charge still provides over eight hours of use. When the battery does begin to run down, a gentle low power alarm will be heard. Recharging typically took 60 minutes from an AC source. The unit can be operated and charged via the cigarette lighter connection while riding. If you even want to charge it with the computer this is possible because the SMH10 is also USB charging.
